

The background of the entire image is a photograph of a vast green agricultural field with rows of crops, stretching towards a horizon under a bright, hazy sky with scattered clouds. A large, semi-transparent white graphic, resembling a stylized leaf or a drop, is positioned vertically in the center of the image. The Staphyt logo is located at the top of the image, with the word 'Staphyt' in a large, white, sans-serif font. Below it, the words 'empower' and 'science together' are written in a smaller, white, sans-serif font, stacked vertically.

Staphyt

empower
science together

As a service provider and consultant in regulatory affairs, Staphyt operates internationally in the agrosience, biocide, chemical and pharmaceutical sectors.

Thanks to the combination of expertise, Staphyt supports its customers at each stage of their product's life by providing innovative solutions to secure their developments.

Staphyt's services are:

Field Services

Quality driven, we provide customised services for agricultural research.

Laboratory Services

Test, screen and evaluate efficiently thanks to a deep expertise and state of the art equipment.

Regulatory Affairs & Consultancy

Working together with clients to define their regulatory strategy and successfully bring their products to market.

Staphyt's communities of scientists, agronomists and regulatory experts guide companies through the registration and commercialisation of their products, substances and varieties.

Alongside its clients, Staphyt contributes to the marketing of innovative and environmentally friendly products.

Field Trials and R&D

Agrochemicals, biopesticides, biostimulants, fertilisers, inoculants & Ag products.

- Efficacy & positioning trials (GEP)
- Residue trials (GLP)
- Seeds care & breeding trials
- Fertilisers trials
- Biologicals trials
- GMO studies

+70 fully owned trial stations

+300 field agronomists, researchers and project managers

Protocols and studies customisation

Our expertises in Agrosiences

Phytopathology

Ecotoxicology & Environmental Fate

Seeds Care & Breeding

Soil fertilisation

Biologicals and Chemicals

Resistance Monitoring

Nematology

Plant Nutrition

Seeds Treatment

Entomology

Weeds

GMO

Laboratory Studies

The effectiveness of our expertise associated with state-of-the-art equipment.

- Phytopathology
- Weed science
- Nematology
- Pest sample rearing & Commercialisation
- Resistance Monitoring
- GMO studies
- Seeds Care
- Plant nutrition
- PhysChem properties
- Stability & Storage
- Analytical & bioanalytical chemistry
- Environnement Fate & Ecotoxicological
- Endocrine disruptors
- Food processing & Sensorial analysis

Regulatory Affairs & Consultancy

Meet all aspects of chemical and biological regulatory obligations, to achieve authorisation for the production, marketing and sale of new or existing substances or products in their target countries.

- Strategic and regulatory consultancy
- Studies management and monitoring
- Client obligations under the EU Transparency Regulation
- Dossier preparation (products & active substances)
- Post submission support throughout the process
- Support with any national specific requirements
- Task Force or Consortia support
- Data gap assessments and audit
- Literature search & review
- Representation services
- Due diligence
- Regulatory Watch
- Risk assessment

Pan-European & Latin America

Trial Programme Coordination

**A multidisciplinary team
dedicated to biological products.**

BioTeam gathers experts in
plant-physiology and phytopathology,
agronomy and regulatory affairs.

 **Biopesticides**

 **Biostimulants**

 **Biofertilisers**

Our team is yours.

Staphyt is a pioneer CRO in supporting its clients in the study of biological products. In 2011, BioTeam, a team dedicated entirely to this sector was set up by bringing together agronomists, scientists and regulatory experts specialising in biopesticides and biostimulants.

Since then, Staphyt has contributed to the development of numerous products and active substances, such as natural extracts, microbial agents and semio chemicals, representing the main plant protection and plant nutrition products on the market today.
