Address (installer):

All tents and marquees must be able to withstand a wind speed of 100km/hour (art. CTS 3) and have a safety register for the structure certifying the wind resistance and a fire resistance classification of the tarpaulin in M2.

► **CTS 37: (check the boxes)**

- the structure has at least two 0.90 m wide exits ☐
- it is anchored or weighted in accordance with the manufacturer's recommendations ☐
- it has an envelope in a material conforming to French M2 fire resistance rating (or EN-13501-1 C-s3, d0) ☐
- the fire resistance rating is confirmed by the NF fire resistance mark ☐
- the fire resistance rating is confirmed by a fire resistance report and the permanent marking on the fabric or assembly welds of the rating (M2) followed by the fabric manufacturer's mark ☐
- the manufacturer of the envelope certifies that the fabric corresponds to the report ☐

moreover:

- the structure does not have any electrical installations ☐
- the structure has electrical installations ☐
- all circuits are protected by a high sensitivity RCCBs ☐

► **CTS 52 §1:**

a visual inspection is carried out before the public is allowed to enter:

- by the exhibitor ☐
- by a person specifically designated by the exhibitor ☐
- the stand has been:
 - inspected for any anomalies or risks in the equipment provided to prevent fire and panic ☐
 - checked for clear passageways and emergency accesses ☐
 - checked for the presence of the fire safety service ☐

(draw up one document for each structure)
