

ENVIRONMENTAL POLICY

Infopro Digital, a leading provider of professional information, is strongly committed to an environmental certification approach. Our aim is to control and reduce the direct and indirect environmental impacts related to the various phases of our activities, from a life cycle perspective.

We have been ISO 14001 certified since 2015 for all our activities managed from France. This includes the development, maintenance and consultancy services for our specialised software and online platforms, the design and production of professional media (publishing, websites, and databases), and the organisation of trade shows, events, and training programmes.

In this context, Infopro Digital Group is committed to the following:

- Ensuring compliance with our legal obligations.
- Protecting the environment, specifically by preventing pollution risks that may result from our activities.
- Continuously improving the performance of our Environmental Management System (EMS).

To meet these commitments, we have set seven targets for the years 2024 to 2027:

1. To evaluate, control, and effectively manage the consumption of our new Infopro Digital Campus in Gentilly (94, France).
2. To support the landlord of the Infopro Digital Campus in their efforts to obtain environmental certifications, and remain attentive to the stakeholders.
3. To reduce the carbon footprint of our vehicle fleet.
4. To reduce the environmental impacts of our printed publications by introducing new sustainable strategies throughout each life cycle.
5. To implement a common action plan for our trade shows and events.
6. To manage the carbon footprint linked to the hosting of our digital products.
7. To raise awareness of our ISO 14001 approach and engage our employees.

The EMS relies on an internal network led by the operational lead, Victoria Rouleaud. The strategic lead, Sophie Le Ménahèze, is responsible for the EMS and reports to management on the environmental performance of the scope.
